(54) Title: A MOBILE DIGITAL COMMUNICATION/COMPUTING DEVICE HAVING A CONTEXT SENSITIVE AUDIO SYSTEM

(57) Abstract: A mobile client device, such as a wireless mobile or a palm sized personal digital assistant, is provided with at least a first and second audio resources and companion programming instructions/circuitry to generate various audio signals in a more context sensitive manner, while multi-media resources are being utilized. The instructions/circuitry cause the mobile client device to determine a first audio volume level at which the mobile client device is being utilized by a user for a first audio signal. Once the first audio volume level is determined, instructions/circuitry cause a second audio signal to be provided at a second audio volume level to the user. The second audio volume level being based at least in part on the first audio volume level initially.
